

DBM REFLEX®

Vari-Flex™

*The **Vari-Flex™** electroform uses a unique patented technology that makes it possible to vary prism axes continually.*

In developing **Vari-Flex™**, DBM Reflex has given engineers a new tool for producing reflex reflectors and opened up a new field of application for reflectors as style elements.

A **Vari-Flex™** electroform allows the creation of a strongly curved reflex reflector with a perfectly homogenous aspect.

Only with **Vari-Flex™** can the transition from rear reflector to side reflector be achieved with no loss of aspect: the discontinuity between prisms has been eliminated without defects.
