

# VARI-FLEX™

The Vari-Flex™ electroform uses a unique patented technology that makes it possible to vary prism axes continually.

The Vari-Flex™ technology by DBM Reflex gives engineers a tool for producing reflex reflectors with large surfaces and curved shapes. A Vari-Flex™ electroform allows the creation of a strongly curved reflex reflector with a perfectly homogenous aspect. Only with Vari-Flex™ can the transition from rear reflector to side reflector be achieved with no loss of aspect: the discontinuity between prisms has been eliminated without defects.
